

Hello.

We are writing to share an opportunity to participate in a research study. The study aims to investigate how individuals with a neuromuscular condition may be impacted by having a sibling who shares their same diagnosis.

You are eligible to participate in the research study if you are 18 - 40 years old, have a genetic diagnosis of Myotonic Dystrophy, and have a sibling impacted by Myotonic Dystrophy.

The research study consists of a screening survey and a video conference interview that will take from an hour to an hour and a half. Study participants who complete an interview will be compensated \$50 for their participation.

The study is being conducted by Rebecca Mueller and Marin Kalista in the University of Pennsylvania's Genetic Counseling Program.

If you would like to learn more about this study or would like to participate, follow this link <https://redcap.link/ybd2kyiy> to find additional study information and the study survey. Please feel free to contact Marin Kalista with any questions.

Thank you in advance for your consideration.

Sincerely,

Rebecca Mueller and Marin Kalista
